

Severity Index

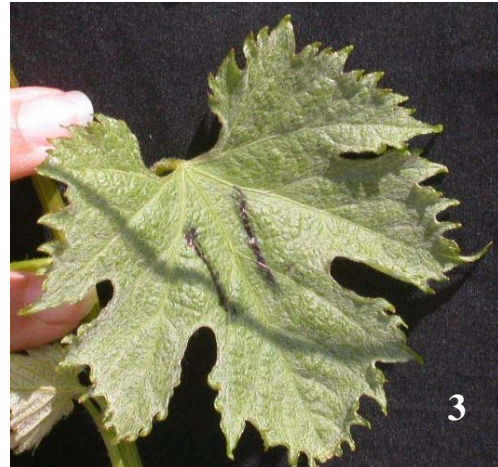

No visible symptoms of phenoxy-like herbicide exposure. Margins and lobes are well defined. No apparent rugose texture.

Possible rugose (bumpy) features on leaf surface. Possible slight shortening of lobes and sinus. The leaf will grow to normal or near normal size.

Rugose features as well as disfigured margins. The leaf will be noticeably, but not significantly, smaller than leaves with a lesser rating.

Deformation of leaf margins. Has diminished or possible lack of sinus. Lobes may be blunt. Lighter leaf color. Leaf will be significantly smaller than those with a lesser rating.

A Definite deformation of leaf margins and sinus. Noticeable vein clearing. The leaf will be very stunted in size.

The leaf will be severely dwarfed. Venation will be parallel. The margins may resemble the end of a straw broom. Grossly deformed leaf.
